

RECOMMENDATIONS FOR CARE OF THE SLUDGEHAMMER ABG SYSTEM:

This home is equipped with a very sophisticated septic system. This system is designed to accommodate 2 persons per bedroom under normal use. Following is a list of requirements in order to ensure that septic problems do not interrupt your stay.

1. Do not flush wipes into the septic system, even if they claim to be biodegradable.
2. If anyone in the household is on antibiotics or is receiving chemotherapy, notify your service provider.
3. Do not flush feminine products into the septic system.
4. Laundry is recommended every three days and loads should be spaced out.
5. If an outdoor shower is available, use it as often as possible (summertime).
6. One indoor shower per person per day is recommended and limit the length of showers.
7. Limit your use of bleach. Follow the directions on the bottle. Typically, one capful is more than enough for a large load of laundry.
8. If you are experiencing smells, call your service provider.
9. If you notice overflow from the septic tank, call your service provider.
10. If you overload the system, you may have to call a pumper to have the tank pumped. The cost of this is typically \$400 per 1000 gallons.
11. Call your SludgeHammer service provider if you plan to have a large gathering or if you are having extra guests for an extended period of time. This will alert them to the increase in flows and they can make additional recommendations for a trouble-free event.
12. If the property is a rental, please make sure renters are aware of these recommendations.
